

### Features and Advantages

- Based on the internationally recognized Acktar technology
- Extremely low hemispherical reflectance
- Wide band performance – UV thru MWIR
- Moderate abrasion resistance
- Adhesive back to ease mounting to surfaces (optional)
- Wide range of standard sizes and customized options

Acktar Light Absorbing Panels are used to eliminate stray light reflectance in optical applications. Acktar Light Absorbing Panel feature high emissivity with low reflectance and low outgassing. The panel is available in customized shapes and sizes to meet customer's application needs.

\* Available also on aluminum foil.
